Research Interests

I am curious about how individual brain networks support cognitive functions like language, memory, and emotion; how disruptions in these networks lead to neurological and psychiatric disorders; with the ultimate goal of identifying biomarkers and neuromodulation targets to advance personalized brain healthcare.

Education

26/03 - 27/03 **Harvard University**, *Visiting Student (Full-Time Master's Thesis) at Dr. Randy Buckner's Lab.*

24/08 - 27/03 **École Polytechnique Fédérale de Lausanne**, *MSc in Neuro-X*, GPA 5.4/6.0.

20/08 - 24/07 **Southern University of Science and Technology**.

- Bachelor in Intelligent Medical Engineering, GPA: 3.84 / 4, Rank 2 / 22.

23/02 - 23/06 **University of Zurich**, *Visiting Student in Neuroinformatics.*

Research

Harvard University, *Visiting Student at Dr. Randy Buckner's Lab*, Full Time (40h/Week).

26/03 - 27/03 I conceived and developed iGENMap, a novel precision mapping method that uses functional eigenmodes to map individual brain networks. iGENMap can resolve reliable individual network topography from as short as 14 min of fMRI, rather than the hours of data required by conventional methods. This enables population-scale studies of individual functional networks and substantially reduces the imaging burden for clinical applications.

26/03 - 27/03 Precision mapping offers accurate targets for TMS in depression, but also requires extensive fMRI data. I developed a novel framework for optimizing TMS target site and coil orientation in absence of individual fMRI data. Electric-field modeling showed that the framework achieves decent individual network selectivity with structural MRI alone or even scalp measurements alone, offering practical, low-burden options for clinical TMS targeting.

MPI for Human Cognitive and Brain Sciences, *Intern at Dr. Sofie Valk's Lab*, Full Time (40h/Week).

25/06 - 25/08 I developed a deep learning framework to predict individual brain glucose metabolism from structural and functional MRI features, demonstrating that metabolic profiles can be reliably inferred from MRI-based representations and generalizes across subjects and datasets.

Harvard Medical School, *Visiting Student at Dr. Jingyuan Chen's Lab*, Full Time (40h/Week).

23/07 - 23/12 I investigated the human brain resting-state metabolic connectivity derived from functional PET-FDG, and identified a robust superior-inferior metabolic architecture primarily driven by low-frequency dynamics, which aligned with known functional and anatomical organization.

Southern University of Science and Technology, *Research Assistant at Dr. Quanying Liu's Lab.*

23/05 - 23/08 We reviewed how large language models can benefit from cognitive sciences, with the goal of integrating cognitive science priors into tests for artificial general intelligence.

22/09 - 24/07 We explored the effects of distinct drugs on large-scale neural dynamics of zebrafish brain using calcium imaging data collected from light sheet fluorescence microscopy.

Awards

25 / 02 EPFL/HMS **Bertarelli Fellowships (5 Recipients Per Year With $42,000 Scholarship)**

24 / 07 SUSTech - **Distinguished Graduate Award**

24 / 05 "Shenzhen Universiade" International Scholarship **(45 Recipients Nationwide)**

22 / 10 SUSTech Department of Biomedical Engineering - **Outstanding Student Scholarships**

22 / 06 China College Student Innovation Training Program – **Undergraduate Research Grant**

22 / 06 2022 Guangdong Biomedical Engineering Design Competition – **First Prize**

22 / 05 13th "Challenge Cup" Guangdong Entrepreneurship Plan Competition – **First Prize**

19 / 05 The 13th Asia and Pacific Informatics Olympiad (APIO) – **Bronze Medal**

Talks

Functional eigenmodes enable reliable mapping of specific brain networks from limited data

26 / 11 Invited Lab Meeting Presentation, *Dr. Jingnan Du Lab @ ND*

26 / 10 Invited Lab Meeting Presentation, *Dr. Soo-Eun Chang Lab @ UMich*

26 / 09 Invited Lab Meeting Presentation, *Dr. Lauren DiNicola Lab @ UVA*

26 / 03 **Human Cerebral Cortex Organization Characterized by Functional PET-FDG "Metabolic Connectivity"**, *at Molecular Connectivity Working Group (MCOS) Talk Series*.

24 / 02 **The Organization of Human Cerebral Cortex Estimated by Functional PET-FDG: The Promise and Controversy of Metabolic Connectivity** , *at Science on Tap*.

Community Outreach

22/02 - 23/02 **Teaching Assistant and Workshop Organizer**, *Introduction to Programming*, SUSTech.

21/06 - 22/06 **Peer Mentor**, *Shuren College*, SUSTech.

Programming and Software Skills

Proficient: Connectome Workbench, Freesurfer, SimNIBS, SPM, FSL, Python, MATLAB, JAVA, LaTeX.

Working Knowledge: C/C++, AFNI, R, HTML, CSS, Git, Linux, Neurodesk.
